CHALLENGES

The challenges that I had with this lab were trying to make it visually pleasing.

It can be frustrating when you know where something should be on a web page, but still figuring out how to put what I envision in my head into actual code. </p>

PROBLEMS

I wasn't able to get the sidebar to the right of the page, it was on the left hand side. Other than that, I didn't have too many problems besides coding grammar errors

RESULTS

I noticed that on my other labs, I was copy and pasting the code so I didn't really even know what I was doing. I felt like I was faking it and developing bad habits of taking way too many shortcuts. This lab was different because I actually decided to start from scratch and take the time to actually understand the concepts that I was implementing it on my webpage. I feel a lot more confident style my page but understand that I have a ways to go before I can comfortable code without always having to copy and paste</p>

```
<!DOCTYPE html>
<html lang="en" dir="ltr">
  <nav id="links">
    <a href="../index.html">CST251 Homepage</a>
    <link rel="stylesheet" type="text/css" href="css/index.css">
  </nav>

  <aside id="sidebar">

    I went to the Netherlands in 2019 <br>
    I enjoy skateboarding in the streets <br>
    I have a ceramic business called ABCERAMICSS <br>
    I believe that I have genius potential <br>
    I enjoy being outdoors in nature as oppose to the city vibes <br>
    I plan on buying land and building a tiny house <br>
