

Aaron Borum & Ariana Moniz
LAB 8:CSS Selectors
Web Tools

Aaron Borum

Challenges

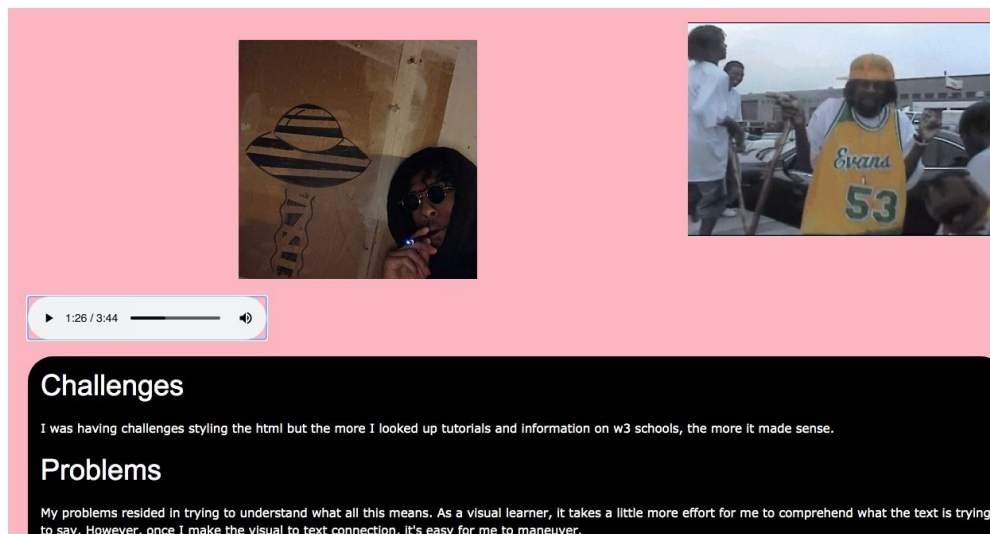

I was having challenges styling the html but the more I looked up tutorials and information on w3 schools, the more it made sense. I also had challenges when it came down to formatting the CSS exactly how I wanted it to look.

Difficulties

My problems resided in trying to understand what all this means. As a visual learner, it takes a little more effort for me to comprehend what the text is trying to say. However, once I make the visual to text connection, it's easy for me to maneuver. Another difficulty I had was figuring out what the actual link was for my github websites because I noticed in previous labs that I forgot to include that!

Results

I enjoyed working the CSS into this project, it definitely made things a lot more interactive for me. Through the learning process I was able to refine my webpage in a way that is new to me. I am looking forward to building on what I have learned thus far and then turn this into something that can be helpful to others. Technology is only growing. It's either you can sit on the sideline as a spectator, or be in the game...I'd rather be in the game.
